Water, sewer and storm drainage laterals for single family detached homes are installed primarily by the property owner at the property owner's expense. The owner is responsible for installing the lateral line from the main to the meter for water service, including the connection to the main and meter box install. Installation and connection of the lateral requires a Public Works Permit and related inspections. The City will install a standpipe for construction; and subsequently the meter upon approved final Public Works inspection for the home build. The property owner is similarly responsible for installation of sanitary sewer and storm drainage laterals, including connection to the main, at the property owner's expense, which requires a Public Works Permit and related inspections. In new subdivisions, the laterals and meter boxes are typically pre-installed by the subdivision developer.
